CERTIFICATE
ELASTIC STACK TRAINING

Hendrik Kaiser

attended the above mentioned training on *25.–27. November 2025*

With this 3-day training the attendees received a detailed introduction into the open source based log management tools Elasticsearch, Logstash and Kibana. Furthermore, this training course imparted basic techniques for log transmission, evaluation and analysis.

TRAINING CONTENT

· Introduction to Logstash and ElasticSearch
· Installation and adjustment of wrapper-scripts
· Usage of input-and output-pluginsProvider
· Installation of different log-ships like Syslog and Beat
· Usage of filters for modification of logs and events
· Correct usage of Kibana for data analysis
· Design of diverted areas with the usage of Redis
· Connection of 3rd party tools such as Icinga

All topics are covered within 3 days. The individual training units consist of a balanced mix of theory and practice, whereby the lessons are supplemented by hands-on exercises.
